

# Solar Accent Lighting

## IMPORTANT PLEASE READ BEFORE ASSEMBLY

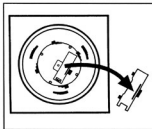

To assure maximum battery contact for charging and illumination, the battery holders in your solar light are constructed in such a manner as to assure a tight fit at all times. It may be necessary for you to twist and/or turn the batteries slightly as they are inserted and also once they are in place to assure proper contact.

If your light does not appear to be working properly please try the following: (from a technological standpoint there is very little that can go wrong with this product)

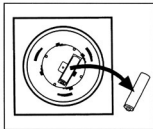

- Make certain batteries are inserted properly...see (+) and (-) markings
- Move the batteries back and forth slightly to ensure proper contact
- Make certain that the batteries are charged (expose the solar panel on the assembled fixture to at least one full day of bright sun.)

**Remove plastic strip  
before installing.**

**Remove cover.**

**Install battery.**
