8	#8 x 1" Screw, Caps, and Washers
3	Round Spoke Caps
2	1 1/2" Square x 16" Stakes
1	Instruction Sheet

## Arch and Square Top Trellis Assembly Instructions

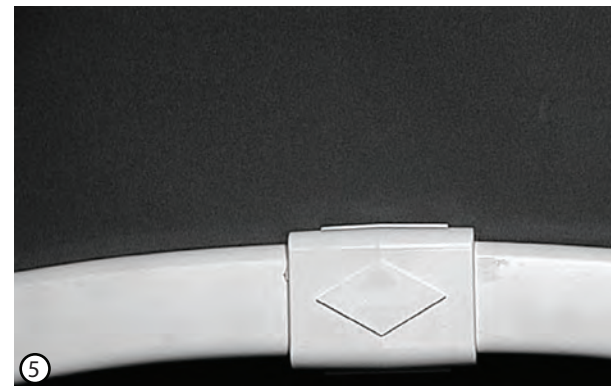

Determine the location of the trellis in your garden and drive ground anchors in place 25 3/4" outside to outside. Posts should be plumb and can be permanently installed with concrete.

Arrange the components of each side wall on a clean flat surface. The interior of the wall can best be assembled by inserting the three vertical rods into the bottom rail first, followed by the shorter cross piece, then the middle.

Using the screws with snap caps, secure the interior sub-assembly to the side posts. Put a cap on each screw used. When side walls are completed, carefully slide posts over ground anchors.

For Arch Top Trellis: Join the two arch sub-assemblies together using the connector shown above. Connectors are included with each kit.

After finishing sub-assembly, insert rails into the side posts.

Finish dowel tops with caps.

For Arch Top Trellis: With the same type of connector used previously, join the completed arch assembly to the side walls.

For permanent installations of the Arch Top Trellis, use the glue that is provided in the kit for top and side connectors.
