

SUREClose®

CAUTION - YOU MUST INSTALL A GATE STOP with this product!

SureClose SF models require a separate gate stop to be installed to prevent the gate from being forced past 90°. Recommended opening setting is 85° to take into consideration possible installation abnormalities.

This package does not contain an external gate stop. It is the purchaser's responsibility to provide one. Absence of a gate stop will void warranty.

D&D recommends installing the gate stop at the bottom of the fence post if gate is lower than 84" (210cm).
