

TENAX

Turf Reinforcement Mesh

Tenax's Turf Reinforcement (TR) is a green polyethylene extruded mesh used to reinforce grassed areas where vehicles & pedestrian pass. This "Go Green" product is natural looking, UV stabilized, cost effective, & easy to install. It also helps to reduce stormwater run off which is a common concern with traditional asphalt & concrete. Once installed, TR provides a very stable surface suitable to support cars, lightweight trucks & pedestrians. TR protects against ruts commonly caused by vehicles & helps to reinforce the root system. For optimal results, install in the spring.

TURF REINFORCEMENT MESH

| Product Code | Color | Roll Size | Mesh Size | Weight Per Roll |
|--------------|---|-----------------|-----------------|-----------------|
| 64313308 |  | 6.7 ft x 100 ft | 1 3/8" x 1 1/4" | 88 lbs |

METAL FIXING PINS

| Product Code | Color | Quantity Per Case | Size |
|--------------|---|-------------------|--------------|
| 2A060016 |  | 500 | 8" x 1" x 8" |

PARKING MARKERS

| Product Code | Color | Quantity Per Case |
|--------------|---|-------------------|
| 3A032242 |  | 100 |

Ideal Uses:

- Over-Flow Parking
 - RV Parks
 - Golf Cart Paths
- Residential Parking for cars, boats & RVs
- Farmyard vehicles
- Auxiliary parking areas for concerts, fairs and festivals

WARNING:

Although we have produced the most slip resistant grass protection mesh, we cannot account for all the variances in climatic and ground conditions. Until the grass has grown through the mesh and become established, the mesh may be slippery if it becomes wet. Special care should be taken if pedestrians walk on the mesh, especially if wearing athletic shoes with spikes, such as golf shoes, cleats, etc.
